STERILISER BOX

Instructions for use.

Remove tamper proof closure and any stickers from the box. Wash soothers & box with mild soapy water, then rinse with clear water before use to ensure hygiene. When using the self-sterilising method; please ensure the soother, box and microwave (including the waveguide-cover and turntable) are COMPLETELY CLEAN and free from dirt, food residue, fat or oil splashes. If not, this could lead to the product or box melting and the microwave sparking or the waveguide cover burning! 1. First, hold box and fill to the mark with 25 ml of water. 2. Place soother in the box with the teat facing down. 3. Close box and heat in the microwave at 750 – 1000 watts. Set the microwave timer according to the number of boxes being simultaneously sterilised (1 box = 3 minutes, for multiple boxes please find instructions on www.mambaby.com). Follow the user manual of your microwave. Don't put the steriliser box at the center of the turntable. Don't leave your microwave unattended during the sterilising process. Stop the microwaving-process immediately if all water is vaporised. Allow to cool for a minimum of 5 minutes. Open microwave. CAUTION! The box, water or soothers may still be very hot. After microwave sterilising, soothers kept in the closed box will remain disinfected for up to 48 hours. For immediate use, open the box and drain the remaining water. Leave soothers to dry in slightly open box. Check the temperature of the soothers before use. Improper water level, power level or time setting can damage the microwave, soothers and box and this can result in poor disinfection. For use only with MAM soothers. Keep steriliser box away from children.

- Step 1:** Fill box to the mark with 25ml of water.
Step 2: Place soothers in the box with teat facing down.
Step 3: Close box and heat in the microwave (750-1000 watts).
