

Extra Soft Bottle Spout

Online Shop

EN

Instructions for Use:

- Before the first use, clean the product. Then place it in boiling water for 5 minutes. This is to ensure hygiene.
- Before the first use, press gently on the mouthpiece of the spout to check if the slits are open.
- Inspect carefully before each use and pull the feeding spout in all directions.
Throw away at the first signs of damage or wear.
- Spouts **MUST** be replaced every 1-2 month for safety and hygiene reasons. Or at the first signs of damage or weakness to any part of the spout.
- Before each subsequent use, carefully clean the spout in warm soapy water. Rinse well with clean water before sterilising, in order to ensure appropriate hygiene. Avoid harmful ingredients in the soap such as alcohol, chlorine, and/or microplastics.
- Dishwasher safe in top rack (max. 65°C/149°F) but food colourings may discolour the spout.
- Clean the mouthpiece of the spout with special care to prevent damaging the membrane. Do not use abrasive cleaning agents. Only soft brushes or soft sponges should be used.
- After cleaning, sterilise using one of the following methods: steam sterilising (electric or microwave according to manufacturer's instructions), boiling in water for at least 10 minutes or liquid sterilising solution. After boiling or sterilising allow the spout to cool down.
- Do not leave the spout standing in cleaning or sterilising solutions longer than recommended. Do not leave in direct sunlight or heat; this could negatively affect the product function and may weaken the spout.
- Ensure no residual food remains in the spout after cleaning and before sterilising.
- Assembling the SPOUT: Insert the spout into top of bottle or Trainer+ screw ring – until you hear a “click”.

Further important information

- When first used and sometimes during use, the ventilation slit (in the raised bubble on the underside of the spout base) can stick together. This will prevent air from entering the bottle or Trainer+ during feeding and as a result, cause the spout to collapse. Slowly brush over the bubble (ventilation) a few times with your thumb or fingers to re-open the slit.
- Do not use pins or sharp object to enlarge feeding slits.
- Store spouts in a dry sealed container.
- The spout is compatible with all MAM Bottles and the Trainer+.
- Please retain instructions for future use.

For your child's safety and health**WARNING!**

- Continuous and prolonged sucking of fluids may cause tooth decay.
- Always check food temperature before feeding.
- Throw away at the first signs of damage or weakness.
- Keep components not in use out of the reach of children.
- Never attach to cords, ribbons, laces or loose parts of clothing.
The child can be strangled.
- Never use feeding spouts as a soother.
- Always use this product with adult supervision.
